

## Global Days or Global Surgery

Once the user saves an entry in Transaction Entry with a global surgical procedure assigned to it, an automatic calculation is done to determine the period end date for that procedure. This calculation is assigned automatically to the **Global Coverage Until** field, on the Personal tab of the case associated with that entry.

*All charges for this case, entered after this Global Surgical procedure and through the date the global period days expires, default to a zero amount, regardless of the standard default for that charge. The user may override the zero amount charge with a different amount. If the user chooses to change a charge that falls within the global period to a non-zero amount, then the following warning displays:*

## **OTHER FEATURES**

### **Number of Diagnosis:**

The user now has the ability to set the system to allow for either 4 or 8 diagnosis.

**Treatment Authorization Field:** Added to each Policy Tab since each payer may give a different authorization for the patient

### **ERA Enhancement:**

The **Prompt for Date** has been included in Medisoft Version 14 which allows the user to specify the date of payments.

### **File Locking in Deposit Entry:**

In previous versions of Medisoft, opening the Apply Payment to Charges window in Deposit Entry locked out all other program features. There is a new *View Transactions* button which opens a *Read Only* Transaction Entry window with the same account from the Deposit List. This feature allows access and operability to all of the functions within Medisoft.

**Electronic Statement options thru BillFlash-** marketing info available

**Relay Health** -connecting patients and physicians - marketing info available
